ABOUT ME

Software Engineer with 1.5+ years of experience in software development and AI, seeking full-time roles in software development engineering or applied AI.

WORK EXPERIENCE

SOFTWARE DEVELOPER – SMART FIELD SERVICE – 1 Sep 2024 – 28 Sep 2025 – DHAKA, BANGLADESH

- Develop and implement secure authentication systems and payment gateway integrations.
- Enhance Biometric authentication solutions for secure identity verification.
- Developed and integrated a custom role-based admin panel in Django for fine-grained access control, enabling
- secure permission management across multiple apps and user roles.
- Collaborate with cross-functional teams to deliver high-quality solutions.

INTERNSHIP – CUTTING EDGER – 13 Mar 2023 – Sep 2023 – DHAKA, BANGLADESH

- Develop and implement background removal functionality through API integration.
- Assist in designing and optimizing front-end user interfaces for improved user experience.
- Collaborate with team members to enhance web and mobile app designs.

EDUCATION AND TRAINING

1 OCT 2025 – CURRENT Amberg, Germany
MASTER OF SCIENCE (MSC) Ostbayerische Technische Hochschule Amberg-Weiden

Field of study Artificial Intelligence for Industrial Applications

18 OCT 2020 – 11 SEP 2023 Dhaka, Bangladesh
BACHELOR OF SCIENCE (BSC) University of Liberal Arts Bangladesh

Field of study Computer Science & Engineering

SKILLS

C | Java | Python | Django | JavaScript | MySQL | GitHub | Deep Learning | LLMs | Machine Learning

PROJECTS

Office Assistant

- Developed an AI-based FAQ chatbot capable of answering questions from large text datasets.
- Implemented text chunking, semantic embeddings, FAISS-based similarity search, and LLM-driven answer generation.
- Built the project in Python to enable efficient semantic matching and an interactive question-and-answer experience.

Crowd Vision: A Machine Learning System for Real-time Crowd Density Estimation

- Developed "Crowd Vision," a machine learning system that uses computer neural network algorithms to predict real-time crowd density in different situations.
- Python, TensorFlow, and OpenCV were used to develop a crowd density prediction system that was easily connected with monitoring to improve crowd control and safety.
- developed a user-friendly web application for analyzing and showing crowd movements in real time.
